SPECTROCHIMICA ACTA

PART A: MOLECULAR SPECTROSCOPY

Editors: Professor Sidney Kettle, School of Chemical Sciences, University of Ea
Anglia, Norwich NR4 7TJ, U.K. ***Fax* 0603 507747**
Professor Jeffrey Steinfeld, Department of Chemistry, Massachusetts Institute
Technology, Cambridge, MA 02139, *U.S.A.* ***Fax* 617 253 7030**

AIMS AND SCOPE

Manuscripts dealing with both experimental and/or theoretical aspects of molecular spectroscopy application in chemical problems, will be considered for publication in *Spectrochimica Acta Part A.* areas include infrared, visible, ultraviolet, Raman, microwave, and photoelectron spectroscopy, magnetic and electric spin resonance, optical rotatory dispersion and magnetic circular dichroi neutron and light scattering. In addition to fundamental papers on molecular structure and inte papers dealing with applications in areas such as qualitative and quantitative analysis, surface spectr non-linear optics, laser photochemistry, aeronomy and extraterrestrial spectroscopy, instrumentati biochemistry are also encouraged. To be acceptable, manuscripts should possess significant timelin promise. Papers describing basically preparative work or a repetition of well established methodolog theory are acceptable only as a short note accompanying deposited data.

NOTES FOR CONTRIBUTORS

I. General

1. Manuscripts should be submitted directly to one of the Editors: *Professor Sidney Kettle* (U.K.) or *Professor Jeffrey Steinfeld* (U.S.A.). Manuscripts may be submitted by fax to either of the Editors but should be backed up by a typescript submission using normal mail to the same Editor.

2. Manuscripts should have clear scientific value and either report new data, procedures, equipment, or new theoretical considerations, as noted in "Aims and Scope" above.

3. Manuscripts must not have been published elsewhere, and authors must agree not to communicate the same material for publication in any other journal or book. For this purpose, reports or other material intended for limited distribution will not be considered as publications.

4. Special review articles will, as a rule, be prepared by invitation. The Editors will welcome suggestions for review articles, special topical issues, or conference proceedings.

II. Manuscript Preparation

1. Papers must be written in one of three languages, namely English, French or German.

2. Authors should, in preparing their manuscripts, follow the format of articles published in current issues of this Journal.

3. Authors are requested to submit an original, double-spaced, printed or typed copy of their manuscript with *two* xerox copies of both manuscript and figures. Low-quality dot matrix printers should be avoided if possible. The typescript must be neat and legible, and it is of utmost importance that contributors exercise economy in both style and presentation of data. Submission of manuscripts as camera-ready copy in correct journal format is welcomed. For detailed instructions on the preparation of CRC manuscripts see facing page.

4. Authors should, whenever possible, conform to the nomenclature, symbols, and abbreviations adopted by the commissions of such international organizations as IUPAC and IUPAP, as summarized in the following publications: N. Sheppard, H. A. Willis and J. C. Rigg, *Spectrochim. Acta* **43A,** 1 (1987); E. R. Cohen and P. Giacomo, *Physica* **146A,** 1–68 (1987); I. Mills *et al.*, *Quantities, Units and Symbols in Physical Chemistry*. Blackwells (1988).

5. Each figure submitted must be on a separate sheet, numbered with an Arabic numeral. All figures must be provided with captions, which should be typed on a separate sheet, not included on the original figure. Figures should be provided as original pen-and-ink drawings, **photographic** (not xerox copy!) prints, or laser-printed computer graphics. Authors should carefully inspect computer-produced figures for redundant and/or undersize lettering, axis labels, legends, etc., and remove or correct such lettering as needed. Descriptive detail should be included in the figure caption, not printed on the figure itself. The use of trations should be kept to the absolute mini All axes must be clearly labelled, including t of reproduced spectra.

6. All literature references should be cit using sequential citation numbers in brack references, in numerical order, should be incl of the manuscript. References should inclu names and initials, followed by journal ti *World List* abbreviated form, volume, first pa year. References to books, book chapter reports etc., should follow standard forma references are the responsibility of the autho be checked carefully before the manuscrip

7. Papers must be concise without unnece introduction. An abstract in English must b an abstract in French or German may be authors' discretion. Authors may indicate on which parts of the text (e.g. details of experi tables, appendices) may be printed in small

8. It is not possible to publish detailed computer calculation. When appropriate, a clude in the manuscript flow charts for comp Authors are also encouraged to make use *Survey Section*, appearing at the back of t software distribution.

9. Page proofs will be sent to the autho advised to check their proofs very carefull them before returning to the publisher. corrections should be made. At proof sta other than printer's errors, may be charged It is important where multiple authors ar indicate, when submitting the paper, the a correspondence and proofs should be sent. N are assessed and 25 reprints will be furnishe to the author.

10. The original manuscript will be discar cation, unless the publisher is requested to material to the author.

11. *Deposited Documents*. From time to t manuscripts which contain extensive tabul data. While such data may be of archiva should be available to workers in the field, production and distribution of the journa impractical to publish such material in its e reason, we have entered into a supplement sition scheme with the British Library Do Centre, details of which have been given on *Spectrochimica Acta* **43A,** No. 6 (June, 198 encouraged to avail themselves of this servi priate.
